Collaborate with the CI Compass Fellowship Program

CICompass
Student Fellowship

Join the CI Compass Fellowship Program (CICF) to help shape the future of cyberinfrastructure and provide exciting summer experiences and course opportunities for student fellows. Our Major Facility Partners and Faculty Mentors make a real impact on student fellows on their journey toward promising careers in research and cyberinfrastructure.

For Major Facilities:

CI Compass is currently recruiting Major Facility Partners for CICF Program.

Major Facilities can engage in a variety of ways, including the following:

- Providing feedback on the program structure and content,
- Participating as a guest speaker during the Spring Program, and
- Working with CICF team to provide Summer opportunities for students.

We are currently seeking MFs partners who can provide student fellows with summer experiences at MFs starting summer 2024 and beyond.

For Faculty Mentors:

CI Compass is currently recruiting Faculty Mentors for CICF. Faculty Mentors will assist with the following:

During the Fall Semester:

- Help recruit potential Student Fellows by distributing CICF recruitment announcements to undergraduate students in Faculty Mentor's department and school, and reaching out directly to potentially interested students.

During the Spring Semester:

- Provide course credit or auditing options for their students based on Faculty Mentor's institutional requirements, if possible.
- Hold check-ins with student fellows to determine if students need additional support.
- Hold meetings with CI Compass Leadership to provide feedback.
- If possible, present the Faculty Mentor's research regarding cyberinfrastructure, the data lifecycle, or related areas of study to CICF fellows.
